DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-8 are rejected under 35 U.S.C. 102(e) as being anticipated by Nishi (20030081192).

With respect to claims 1-4, Fig.1A shows a method for stabilizing an optical semiconductor laser 11, comprising the steps of: output of (a) heating the semiconductor laser with a heater (para.0060, 1.5) when the semiconductor laser is not in operation and (b) performing one of a first operation of stopping heating of the semiconductor laser and a second operation of decreasing an amount of heat supplied (para.0060, 1.5, heat absorber element) to the semiconductor laser, almost simultaneously with startup of the semiconductor laser (It is noted that the controller 1 in the figure controls simultaneously the temperature adjusting portion 5 including the heater, the heatsink, and the temp. detector and the current driver 2 supplying a driving current to the semiconductor laser 11. Therefore, the controller performs the method steps as recited in the claim.)

With respect to claims 5-8, para.0015 discloses a multicavity semiconductor laser (laser array).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 9-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nishi (20030081192) in view of Hess et al. (6185232).

With respect to claims 9-12, Nishi disclose all limitations of the claims except for the heater being realized by a semiconductor laser chip.

Hess teach in Fig.1 the heater 125 being realized by a semiconductor laser chip 100.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to provide Nishi what is taught by Hess to employ a small and compact semiconductor laser chip with the heater to save cost for manufacturing.

With respect to claims 13-16, Hess disclose a heating resistor (col.2, l.14-15).
